With my 18 years experience exercising and evaluating diseases containment responses I respectfully submit this. In this COVID-19 environment, there will never be a point that provides "No risk" or "No threat" of becoming infected. We are entering the 42nd incubation window since last US state to shut down for the pandemic, that's over 888 days responding to this pandemic. The best response this Charles County can muster is mask mandates, with fines on its citizens? To quote Sun Tzu "Tactics without strategy is the noise before defeat". US planning for influenza pandemic started in 2006, it was recognized that State, Local, and Tribal levels of government represents the nation's front lines in the pandemic battle. Charles County 2018 Hazard Mitigation Plan covers a review of 2012 HMP Mitigation Action Plan clearly states "Encourage immunization against diseases that can be easily communicable among residents of Charles County" and "Establish areas where vaccines and other medication could be dispensed during a public health emergency." Not present in the plan is the use of mask or mandates. I ask the Charles County to focus public health mitigation efforts on supporting surge capacity plans and providing medical services. I would recommend a actual executable plan for mitigation the current county hazard mitigation plan fall dramatically short of a useable plan.
