

I'd like to address tonight the issue of transparency when it comes to these Covid-Health Mandates.

Why is it that Charles County Health Departments are solely focusing on infection rates and case numbers as justification for mask/vaccine mandates?

Why are recovery rates for kids ages 0-17 not being focused on or talked about?

What is the efficacy of the PCR tests given that it has yielded so many false positives for SARS-Cov-2?

And why is this test being used to diagnose SARS Cov-2 when the founder of the test Kerry Mullis admitted that you can't use a PCR to prove infectious etiology or to diagnose an infectious disease?

Given the above and combined with the extremely high recovery rates of kids ages 0-17 why are PCR tests still being used to diagnose kids with SARS COV-2?

Furthermore if the PCR was never intended to diagnose SARS-Cov 2 then how many kids are being misdiagnosed with SARS Cov-2 when they really have Influenza or the common cold?

What are the long term effects of wearing a mask over your face, restricting your breathing for long periods of time?

How is this effecting our students/all of us not just physically but mentally and emotionally?

If these so called vaccines are so effective why are so many people still catching SARS COV-2?

Why is the efficacy of natural immunity not being discussed?

Natural immunity is more effective than these so called vaccines (according the Israeli Study)

Given the many adverse reactions to these inoculations in such a short span of time why are the VAERS reports not being looked at when it comes to potential vaccination mandates?

According to the Stanford Study the size of SARS Cov-2 virus has a microscopic diameter of 60-140 nano meters (1 billionth of meter) while medical and non-medical face masks have a thread diameter that ranges from 55-440 micrometers (1 millionth of a meter) which is more than 1000 times larger than the actual size of SARS Cov-2 virus and there for can easily pass through a face mask so how are face masks really protecting us from this microscopic virus?

Why are the positive effects of proper nutrition vitamin and mineral supplementation as cures to overcome SARS Cov-2 not being discussed?

Do these organizations CDC, NIH, WHO local and State and local Health Departments who are influencing our counties and school districts decisions really have people's health and well-being in mind?

Who are these organizations accountable to?

When did we ever give up our own body autonomy when it comes to our personal health?

I'm asking for transparency on these matters to stand up and be accountable for the health and safety of the locals of Charles County. It's critical that we look at these matters in a more thorough manner rather than just focusing on one or two aspects such as case numbers and infection rates as the sole justification for Health and Safety procedures. I think we can all see w demands of contact tracing quarantining and masking and tremendous burden on all of us and isn't sustainable in my opinion.

These items I've brought forth I feel need to be given more time and attention to by the school board since it's such an important health issue we are all facing right now. I think that this could result in better decisions and procedures for these matters going forward. Right now we all need to be asking questions about these matters. These are our kids, our students our life's our voices and they all matter.
